سودان

Abstract:

Throughout its four phases, from 1979 to 1998 the IPM programme has been instrumental in making a significant headway in reducing the use of insecticides on cotton by 33%. In the subsequent years of the programme, Dr. Abdel-Rahman was assigned as national coordinator whose profile of responsibilities included among others giving policy guidance to the IPM in the country at a time when the IPM programme of the Sudan was marked as one of the most successful programmes.

Under the FAO/TCP project, Dr. Abdel-Rahman was among the leading experts who introduced the Farmers Field School (FFS) in the Sudan. Later, he headed the group which developed and consolidated the FFS programme. He has contributed to 2 books and 18 papers.
